

Customer Service and Inventory Made 'Simple' with VINtell™

Why Northern Apex is the right partner for your RFID Dealership Solution...

An experienced and committed long-term RFID integrator: Northern Apex's sole business is RFID and RFID-related mechanical assembly. Over the past decade, Northern Apex-RFID has implemented its RFID systems at more than 300 client sites around the world interfacing with a variety of hardware and software applications. Northern Apex also has its own production facility, R&D center and team of engineers.

A single company with which to work: Northern Apex designs and engineers complete RFID solutions utilizing world class components from all the top RFID manufacturers from chips, to tags, to reading systems, giving its customers the confidence of working with a single expert provider.

We partner with the best: Northern Apex has developed the VINtell™ solution with the cooperation and assistance of **ADP** and, in fact, is the only RFID Solution Provider with a certified interface with **ADP's Dealer Management Software**.

Related Fielded Solutions: Northern Apex has designed a family of workstations, readers and related devices to simplify the integration and operation of RFID technology in a variety of automotive dealer applications. Our solutions have also been developed to tackle power, network and information systems issues and numerous real-time locating systems, inventory systems and workflow systems utilizing active and passive RFID technology.

Proven RFID systems: As a complete solution provider, Northern Apex is able to warranty the performance of its RFID technology, not just at a component level, but also at a full system level.

Continued Access to the Latest technology: As one of the oldest and most respected RFID integrators in the country and with a decade of experience under its belt and firmly established relationships with all the major players in the world of RFID, Northern Apex has the ability to offer customers continuous access to the latest and most advanced technologies.

Support for your solution: We will provide extensive training and knowledge transfer for your team, either at our location or yours. This training will enable your staff to provide front line VINtell™ support. Alternatively, we routinely work with our customers to design the right support and maintenance contracts to meet their needs. With our optional remote dial-in support, we are able to provide you with "near local" support from our team of software, hardware and electrical engineers.
