

SOLID STATE SEQUENTIAL CONTROLS

- △ MICROPROCESSOR CONTROLLED
- △ EVENT TIMING
- △ MULTIPLE INPUTS AND OUTPUTS
- △ CONFIGURABLE I/O

The Northern Apex standard line of solid state sequential controls are used in a wide range of applications. These microprocessor controlled smart boards can be adapted to several applications.

Based on the number of configurable I/O required, the board can be custom tailored to meet your specific needs.

The outputs can control devices such as motors, lighting, and process feedback indicators, based on a specific function or input sequence.
