

PORTABLE TEST INTERFACE ASSEMBLIES AND AUTOMATED TEST EQUIPMENT FIXTURES

The Northern Apex electro-mechanical assembly staff provides outsource solutions for those products which require custom test interface or portable test integration.

Our manufacturing and test engineering staff can address your particular test application as a "build to your print" assembly. Northern Apex can also provide design, layout or test software engineering services if required.

Typical applications include:

- ATE Interface fixture assembly
- Portable/Handheld device assembly
- "Build to print" or schematic wiring
- Enclosure design, specification, modification and wiring

It is our flexible approach to the assembly of your product that makes Northern Apex different from the competition. Our team will work with you to tailor a specific production process in order to build your test interface at a competitive low cost, while ensuring the utmost in quality. From initial material receiving to final assembly and packaging, our process is documented and tested to meet your needs. Our assembly documentation allows us to build our customers' products continuously, as well as periodically.

Northern Apex can even provide the necessary machining, fabrication, and sourcing to meet your enclosure needs. Protective and decorative finishes, such as powder coating, screen printing and panel labeling, can all be provided by Northern Apex, your single resource.
